

File Number: 0093-EX-ML-2004
Request for Modification of License (WD2XES)

Since the issuance of this license on 4 March 2004, approximately 2400 hours have been logged in the operation of the transmitting facility. Signal reports from as far as 6000 km have been received from 30 individuals. A variety of power levels, antenna configurations and operating modes continue to be evaluated along with an analysis of propagation conditions.

The only modification being requested here is to permit 2-way communication with Amateur Radio operators in countries that authorize Amateur operation in the 135.7 - 137.8 kHz range. A revised "Question 7: Purpose of Experiment" document is included.

No other changes are requested, and all data previously submitted is still valid.

Signed: John K. Andrews
Date: December 24, 2004
