Arcturus-UAV is a manufacturer of small, unmanned air vehicles. We operate at Camp Roberts under a joint CRADA with Naval Postgraduate School (CRADA-NPS-14-0202). This CRADA is used for product development, envelope expansion, training, and customer demonstrations of a GPS Guided precision parachute delivery system(Snowflake). The main use of this aircraft is as the transport vehicle for the snowflakes and an ISR platform and due to this we require the transmission of live video and telemetry data to the ground.
