

“AT&T Corporation requests to conduct an experimental trial of NLOS wireless backhaul pre-production solution(s) for use in our mobility network. The pre-production solutions operate in the 3.4-3.6 GHz and 2.305-2.315 GHz spectrum ranges. The trial will include installation and commissioning of multiple hubs and remote units at AT&T owned facilities to evaluate range, throughput, packet loss, and latency of the NLOS networks.”
