Subject: Additional Information Request

---

Message:

The purpose of our operation is to conduct flight testing of various configurations of the Centaur Optionally-Piloted aircraft in accordance with the program letter and operating limitations issued along with our FAA Experimental airworthiness certification. This license request enables us to operate the data link between the aircraft and our ground control station for telemetry and/or C2 while performing these flights. All flights are manned with an onboard safety pilot acting as pilot in command.
