Subject: Additional Information Request

---

Message:

I just received an email with 3 questions. Please see responses below. 1) provide radiation hazard analysis to verify minimal safe operating distances. I am not able to attached the radar manual using this correspondence page. The radar vendor sent me the details from the manual that states the safe distance for HERP (Hazards of Electromagnetic Radiation to Personnel) is 66.24ft. The safe distance for ordnance is 69.93ft and the safe distance from fuel is 0.94ft. 2) Stop buzzer POC: Bryan Tisinger 540.230.0360 or Justin Nelson 240.66.7780 or Sri Ayyalasomayajula 314.489.8982 3) Will we be conducting any jamming, spoofing, or electronic attack? No, we will strictly be using this radar for detect and track. We will never jam, spoof, or perform electronic attacks.
