Subject: FCC File # 0621-EX-ST-2004

Message:

Dear Mr. Edward E. Thomas:

Please report the minimum and maximum flight levels, the minimum number of frequencies required and identify those frequencies, and the method for selecting frequencies from the 1220-1249 MHz band.

Also, since radars operate on 1241.47 MHz, 1244.06 MHz and 1251.83 MHz in this area of Florida along with a 1227.6 MHz GPS L2 receiver and AEROSTAT radars on 1219 MHz, 1220 MHz and 1235 MHz, please indicate how the proposed aviation protection system will be able to avoid operating on or near all of these frequencies. Furthermore, please indicate how this system will be able to avoid other frequencies in other geographic locations that will also need to be protected.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of November 04, 2004 may result in application dismissal pursuant to Section 5.67 and forfeiture of the filing fee pursuant to Section 1.1108.
