Subject: BAE Systems MMSI

Mr. Kennedy,

BAE Systems is using an AIS base station transponder as part of the MAST6000 AIS network demonstrator. The AIS transponder autonomously transmits location data as required by IMO. The MAST6000 AIS transponder will transmit its position data shore to ship. MAST6000 WILL NOT transmit any AIS broadcast or addressed binary or safety related messages.

I hope this data is useful to you. Please contact Phil Schwaab of BAE Systems with any questions or comments you may have. 410.984.2769

Best regards,
Michael Flatt
