Beceem would like to amend the application to limit operation to the 2330-2360 MHz band. It appears that frequency coordination will not be AFTRCC required as this is below the 2360-2390 MHz band. If this is true, can the grant be issued with the new frequencies? Either way, is there anything else Beceem will need to submit to operate only in the 2330-2360 MHz band?
