

If you have a requirement to transmit in any of the below frequency bands or if your emissions overlap these frequencies, you are required to coordinate with the FAA:

190-285 kHz	1030 MHz
285-435 kHz	1031-1087 MHz
510-535 kHz	1090 MHz
74.800-75.200 MHz	1094-1150 MHz
108.000-122.6875 MHz	1157-1213 MHz
123.5875-128.8125 MHz	1215-1390 MHz
132.0125-137.000 MHz	2700-2900 MHz
225-400 MHz**	5000-5250 MHz
328.600-335.400 MHz	9000-9200 MHz
978-1020 MHz***	

***Only frequencies in the 225 - 328.575 and in the 335.425 - 399.999 MHz bands that are designated for Air Traffic Control must be coordinated with the FAA. Operation on these frequencies requires a Department of Defense Sponsor and approval of the Military Assignment Group (MAG).*

****Frequencies in the band that are going to be used for Link16 (JTIDS) should NOT be coordinated through this website. For Federal applicants of Link16, submit your request directly to NTIA for permanent assignments or coordinate with the Navy Marine Corps Spectrum Center (NMSC) for temporary assignments. For non-Federal applicants, coordinate your request with NMSC through a Department of Defense sponsor.*

Access to this website is limited to entities that have a requirement to conduct radio frequency coordination with the FAA. This may include government agencies, the military services, industry, and non-federal airports. Coordination with the FAA shall be accomplished by establishing an account and filing through this website before filing an application with the National Telecommunication and Information Administration (NTIA) or the Federal Communications Commission (FCC). To establish an account, please submit a request by accessing the "Register" link on the right. Further instructions on how to file for coordination is provided after you log in.

Please contact the WebFCR System Administrator at [202-267-0400](tel:202-267-0400) if you have any questions or need assistance.
