

600m Historical Transmissions & Tests

The purpose of this Experiment is to conduct one-way and two-way transmissions which replicate and commemorate historical radio-related events in the early days of wireless transmissions. A mix of CW and AM modulations will be used.

Events commemorated include Night-of-Nights, Fessenden Transmissions, Marconi Operations, Berlin Treaty, etc.

Communications are with other Experimental Part 5 stations and are made using early 1900's replica and vintage equipment. All operations are under the control of the applicant who is employed as an RF Engineer and who holds both GROL Commercial and Amateur Operator Licenses.;

This experiment is a continuation of former WG2XFQ operations which had its Experimental License expire due to the applicant's oversight.
