

Low Profile LF and MF Antennas
Proposed additions to the experiment
Brian Pease, W1IR, WG2XPJ
3/5/2015

I propose to continue my experiments by documenting the changes in propagation during the decline in the current sunspot cycle, primarily on 630 meters. Due to the long time frame, and with no expected changes in frequencies, antennas, emissions, ERP, etc, I am asking for an extended renewal period of 5 years.
