

Additional Explanation of Request for STA

Subsequent to the initial filing of this STA request and an amendment filed on May 18, 2012 the Republican National Committee requested support for some additional communications equipment to support their needs inside the arena during the convention. The additional equipment is the following:

RadioCom BTR-800 Wireless Intercom
Requested operating frequency range 718-720 MHz
Power (ERP): 10 mW

Due to the significant demand for spectrum at this event, it appears that the only viable spectrum available for these devices is the requested 718-720 MHz. No interference to any other users of the spectrum is anticipated due to the low power (10 mW) and the fact that the units will only be used inside the arena.

In view of this the application has been amended to add the following frequency range:

718 – 720 MHz ERP 100 mW Emission Designator 50K0F3E
