

Exhibit – Co-channel
Broadcast Sports, Inc.
STA – Daytona International Speedway
File No. 0041-EX-ST-2008
STA Confirmation No. EL639642

The applicant has commissioned a study of television Broadcast channel occupancy in the frequency range 482-488 MHz within 100 miles of Daytona Beach, Florida. The frequency band requested, 482-488 MHz, falls within television channel 16. The nearest television channel 16 stations are WHDO-CA in Orlando, FL and WVCJ-LP in Orlando, FL. None of these stations provide any service near or to the Daytona International Speedway, and therefore no interference is anticipated during this event.

Nevertheless, the applicant will coordinate its operations in the requested band with the local SBE frequency coordinator for the Daytona International Speedway, which it does in any case routinely. If any interference is caused by the proposed operation, the applicant will immediately cease using the frequencies without any necessary intervention by the Commission.
