

Frequency Coordination Exhibit
Broadcast Sports, Inc.
STA Request
PGA and NEC Golf Tournaments -- 2007

The applicant has coordinated with all ITFS licensees within a 70 mile radius of the subject golf courses. If consent to operate on the subject channels is not obtained from any of those licensees, the applicant will not make use of the channel licensed to the entity not consenting. Should any interference on any ITFS channel occur, the applicant will cease operation unless and until the interference is remedied to the satisfaction of the complainant.

As to the use of the frequencies within television Channels 16 (for the PGA Championship in Oklahoma) and 18 (for the NEC Championship in Ohio), the proposed operation is outside the Grade B signal contour of all full power and low power television stations at either golf course. However, the proposed operation has been coordinated with the regional SBE frequency coordinators and with the SBE in Indianapolis, IN prior to commencement of operation and if any interference is reported to over the air television viewers, all operation on these frequencies will cease until the interference is remedied.
