Re: KM2XBL (File #: 0185-EX-RR-2001)
[Reference Number: 1468]

Introduction

Cable AML is a manufacturer of microwave links and microwave Broadband Wireless Access systems. Our equipment code is JXZ.

We perform live testing of new equipment first in our laboratory, and then in the field under actual operating conditions. Sometimes the field testing is outside the US, but it may be anyplace in the US where we can get access to a user site.

While we have perhaps 100 models of equipment between 1.5GHz and 38GHz, we typically ship less than ten transmitters a month.

Specific Responses

The manufacturer of equipment is Cable AML, Inc

The model numbers are assigned when each development starts, in the format ITXgg-nnn where gg refers to the operating frequency in GHz and the nnn refers to the equivalent final output power rating in Watts.

We probably field test at total of two or three units in a year.

The field tests are to confirm the suitability of what we have built for deployment

Nationwide use of license is needed because sometimes the field testing is outside the US, but it may be anyplace in the US where we can get access to a user site / signals.
