

Exhibit No. 3

(Reference: Item No. 4-Antenna Info)

The antenna system will consist of one steerable micro-patch phased array planar antenna with sidelobe reduction fence. The antenna will be pointed vertically, with electrically switched delays introduced to point it 21 degrees off vertical, in planes that are 90 degrees from each other. The antenna will have a beamwidth of 9 degrees by 9 degrees, and ~26 dB of gain.

Normal operation will consist of sequential transmissions in each of three (two oblique, one vertical) directions.
