

Exhibit No. 4

(Reference: Question 7-Experimentation Description)

The system that would be operated under this requested license will collect wind and virtual temperature profiles at South Lake Tahoe Airport. The measurement program, sponsored by the California Air Resources Board, Research and Planning and Technical Services Divisions, is named the Lake Tahoe Atmospheric Deposition Study (LTDAS).

This study intends to improve the understanding of atmospheric deposition into Lake Tahoe and to assess transport of air pollutants into the Lake Tahoe Basin from the Central Valley of California.
