

Response to email question on 3/17/03.

"Will Canby Telephone Association perform a market study test and, if so, what financial and contractual arrangements exist between Canby Telephone Association and the participants?" **There is no need for a market study.**

"Also, please submit a justification for the need to use the 240 devices reported in application 0049-EX-PL-2003. **"Canby intends to compare products assembled and manufactured in the USA to products that are manufactured outside of the USA. Radio Ports are small units that are about the size of a laptop computer and are located/placed on utility poles throughout a serving area. The amount of units is proportional to the area for coverage issues. Therefore, it is important to compare an equal number of products for future reference."**
