Subject: Additional Information Request

Message:

Care Weather notes that it is seeking authority for space-to-space links between the Veery RL1 cubesat and the Iridium system. Communication will not be conducted directly with an earth station. Communications between the Iridium system and the ground will occur in the licensed MSS feeder link bands licensed used by Iridium.

The Veery RL1 cubesat will not be launched into sun synchronous orbit and will not conduct any imaging. The scheduled launch of the Veery RL1 cubesat has moved from March 2, 2021 to March 17, 2021. Care Weather has uploaded an updated narrative to reflect this change.

Care Weather also has uploaded an NTIA Space Record Data Form to provide the additional information regarding the Veery RL1 cubesat and the Iridium system requested in the correspondence.

Best regards,
