Subject: Additional Information Request

---

Message:

1) Please provide communication path. Where is the receiver located? Are you communicating between the two sites?

Yes. Both sites transmit and receive. The location centered at 40-7-26, 111-48-57 site has the Cubesat radio prototype and the site centered at 40-10-53, 111-55-27 is the ground station. We will have a variety of communication paths in the radius of operation to test the communication at different ranges.

If you are communicating with the Cubesat then provide the name and call sign of the Cubesat itself.

We are communicating with a prototype of the Cubesat radio and not the Cubesat itself.

2) For each location request, complete the section that says "If Mobile, describe the exact area of operation". Put the name of the City(town), State information. If you're conducting airborne operation then provide the maximum altitude in feet at which you will operate the transmitter. If you're conducting this on a military base then provide the name of the base and the state in which the base is located.

This has been done.

3) Change the Start Date to at least 15 days from the day you have responded and addressed all the items on the list.

This has been done.
