
Mr. Teng,

AFTRCC coordinates 2345-2395 MHz in S-band, which is allocated for Aeronautical Mobile Telemetry. WCS is primary in 2345-2360 MHz and their operational deployment is underway. However, as of now we are still coordinating that band due to a secondary AMT allocation, and a need to protect AMT from WCS OOB above 2360 MHz. If you want to avoid coordinating with AFTRCC, recommend you stay below 2345 MHz.

Regards,

Dan Hankins
