Message:

I have corrected the application to reference the proper frequency band 788-798 MHz.

Note there are many issues with one's ability to modify an existing application. Once I modified the frequencies the form forced me to reenter all the emissions (qty 2) associated with that frequency. Then it somehow duplicated each of the emissions (now 4). When I selected 1 of the 4 emissions to delete it the form deleted all 4 emissions. Thus I had to reenter everything again. When I got done it asked me to confirm which then brings up a window that states do not use the Confirm button if one has already paid. Yet no button exists to SAVE & EXIT plus an option to view the newly modified file. There should be a SAVE & PROCEED button on every page of the on-line form when one is editing an existing application.

Regards,
