Question 7: Purpose of Experiment

- a) Per criteria in Section 8.3.28 of the NTIA Manual, the station class should be “XT.” The GPS re-radiators will be used as “Experimental RNSS test equipment for the purpose of testing GPS receivers” installed in aircraft while the aircraft are inside the Flight Building hangar.

Other attachments to this application show how this system complies with the criteria of section 8.3.28 of the NTIA Manual. Attachments to this application are:

- System diagram with parts list
 - Facility drawing with radiating antenna locations
 - Receiving antenna specifications
 - Radiating antenna specifications
 - Power controller technical data
 - Power controller user manual
 - Power calculations
 - Stop buzzer Points of Contact
- b) The specific objective we wish to accomplish is to ensure aircraft GPS navigation systems are functioning properly without having to relocate the aircraft outside of the hangar. Relocating an aircraft takes several people. Work on the aircraft cannot be performed while it is being moved. Often, other aircraft must be moved to clear a path to the hangar door. This can disrupt work on additional aircraft with associated delays and costs.
- c) This program will reduce time required to service aircraft, increase efficiency and contribute to ensuring the reliability of aircraft GPS navigation systems.

Very Respectfully,

Danny Hankins
Engineer-Sr-D
