Message:

The purpose of this experiment is to validate Chrysler Vehicles' immunity to on board and adjacent transceivers, investigation of customer complaints, and vehicle immunity design verification backup for chamber testing. We endeavor to test in our anechoic chambers due to the efficiency therein, however there can be times we are forced to test outside due to chamber down time or the inability of the chamber to meet real world conditions. We test to our Lab Procedure LP-388C-51 available upon request. (I tried to attach the lab procedure pdf but this website prohibits it.)

Any further questions please contact:
