Subject: Request for information

---

Message:

The applicant appreciates the proposed condition. If it is possible to allow UAV operations up to a maximum altitude of 100 feet AGL, it would greatly benefit the planned testing and make the demonstration more representative of the intended operational use. However, if granting this request would delay the processing or issuance of the experimental license, the applicant is willing to accept the proposed limitation of 50 feet AGL. Thank you for your consideration. We respectfully request that processing of the experimental license application continue.
