Hanger GPS Re-Radiating Installation

Equipment and Operation

In experimental testing and operation of company aircraft GPS receivers inside the hangar we propose and installation of a GPS repeater as depicted in Exhibit 2. The repeater (re-radiator) will only be active during the testing of the receivers. A stop buzzer (On and Off controller) will be installed inside the hangar accessible to personnel conducting the testing operation. Details of the equipment specifics are depicted on Exhibit 1.

Regards,

Carlos Moreta
