MAY 28 1997

RL 1111

EXHIBIT #1 (FCC FORM 442)

The INMARSAT - B satellite terminal equipment will be used to transmit and receive 56/64 kbps data for the City of Los Angeles Emergency Operating Center's Local/Wide Area network. This network goes to where the alternate Emergency Operations Center is established during emergency and disaster conditions such as major earthquake.

The usage of these satellite terminals will improve the high speed data (HSD) applications and techniques for the City of Los Angeles Emergency services and disaster site recovery.
