

ITEM No. 7 Information:

- a) This is an application for an experimental license to test new experimental equipment in six fire stations in the City of Wichita Falls, Texas on 1227.6 MHz and 1575.42 MHz for the design, development and enhancement of existing GPS repeater kits, along with new product testing and trouble shooting of previously manufactured equipment. The Applicant intends to test this equipment for the time period of 24 months
- b) The objective of this project will be to test the use of repeater kits in a indoor environment to allow tracking of fire company vehicles from the devices located inside the City of Wichita fire stations, that is not possible presently.
- c) The City believes that this program of experimentation will increase the ability of fire companies to track fire equipment by personnel inside of the fire stations, which will be a breakthrough since at this point tracking the vehicles is blocked by the buildings themselves.

ITEM No. 12 Information:

The Applicant is a governmental entity, the City of Wichita Falls, Texas.
