

Exhibit 2

Similar license

A similar license for the same purpose and contract was granted to Andrew Scicomm inc. in Garland Texas on July 18, 1996 under the call sign WA2XBK.

We would like to be granted a license to use the same set of frequencies (0.1 – 40 GHz) as were granted in the previous license. The purpose of our request for this license is the same as given for the previous license and is essentially an expansion (30 – 88 MHz radio) and continuation (0.1 – 40 GHz) of the old license for a new location(s). Condor bought Andrew Scicomm and assumed some of it's contracts. This license is necessary to test and calibrate the same system (SCR-2900) referred to in the previous Andrew Scicomm license.
