Application Narrative for Experimental License

## Proposed Program

Conelec of Florida, Inc. is a contract manufacturing company that assembles and tests electronic circuit boards. Several products that we build have GPS capabilities built in. In order to test and verify the GPS function inside a metal building, we need to make use of a GPS repeater.

## Objectives

1. To be able to test and verify that the PCB that we manufacture for our customer is able to pick up GPS signals

## Contribution to the Radio Art

This will be solely used for the purpose of testing and verifying GPS.
