

EXHIBIT A

Background

In 2007, The Nuclear Energy Institute (“NEI”), the Utilities Telecoms Council (“UTC”), Maximum Service Television (“MSTV”), the National Association of Broadcasters (“NAB”), and the Society of Broadcasters (“SBE”) agreed to a Consensus Plan through which the Broadcast parties permitted nuclear plants to continue to use Telex communications equipment, subject to certain power restrictions, geographic limitations, frequency coordination and FCC reporting requirements. In November 2008, the plan was amended to revise Section IV(H).
