

Supporting Documentation

This request is for the coverage of the Million Man March on the National Mall. Operations on the National Mall will include multiple hand held camera systems, microwave links between venues and multiple feeds to handle Big Screens long the length of the National Mall with supporting communications equipment for cueing and camera coordination. This is a very large event.

Due to the heavy use of the spectrum in the DC area we are unable to request single frequencies in this location, the request for full spectrum allows us to adjust frequencies to mitigate frequency interference from and to other users of the spectrum.
