

Supporting Documentation

This STA is being requested for coverage of the MLB Baseball World Series and play offs leading up to and including the World Series. This event requires more RF spectrum than is available by other means. By the nature of this sporting event, dates and locations are not known until just prior to the start of the playoffs. This uncertainty of dates and locations causes a time issue with filing for a standard STA. Because of this date and location uncertainty this filing contains all major league ball parks. Events will only take place at some of these locations. The actual locations will be determined by play. The operating start time would be 10/06/2015. The last possible play date in the series is 11/04/2015. Please find as a separate attachment to this filing the MLB schedule of dates when events will and possibly happen. Filing for this STA has been delayed due to the overhaul of the FCC IT infrastructure.
