

Supporting Information

This filing is in support of 2 RF handheld camera systems and b/u frequency and each location. All RF emissions will be contained within the Stub Hub Center and in the parking lots adjacent to AT&T Stadium. The surrounding super structure of the StubHub Center field should minimize RF radiation into surrounding areas outside the stadium. Transmitters will be used on handheld cameras on the field of play. Transmitters at the parking lot near AT&T Stadium will only operate in the Tailgate area attached to handheld camera systems.
