

Request for **Renewal with Modification**

Current Technologies, LLC (“Current”) requests renewal of the captioned license for a period of twenty four (24) months.

Current also requests modification of the captioned license to reflect two changes:

First, Current requests that the station location reference eliminate the particular references to Ohio, Indiana and Maryland and instead refer to the station locations as Nationwide. As a result of planned further research and development, Current anticipates that its testing will be better represented by a Nationwide designation. Current also notes that a similarly situated license, station WD2XEQ, has been afforded Nationwide status.

Secondly, Current requests that its number of authorized units associated with its Nationwide station authorization be increased to one thousand (1000) units. Current presently is authorized to operate three hundred (300) units at each of the three (3) locations noted above. Because the three previous locations will be subsumed within a Nationwide authorization, Current seeks an adjustment to the number of authorized units to reflect the subsumed locations and future testing units. Current anticipates that 1000 authorized units will adequately accommodate its planned research and development needs at this time. As a result of the nature of the product being tested, numerous units are simultaneously operated and 1000 units is the immediate maximum number of units sought for authorization.
