Subject: , APPLICATION

1. That was a mistake in the form of human error. My personal address is POB 140 Markleysburg, Pa. The actual location for transmitter will be 100 Lakeside Drive, Addison, Pa.

2. What I inserted for the ERP was just the rating that I pulled from some information about transmitters and designs that I hope to be working with that lists the maximum power that can be acheived.. The testing I wish to do will involve only about 500 milliwatts of output, and considering the terrain in our area, (there are mountains on three sides and a twenty mile long lake on the other) the only thing we could cause interference with would be Black Bears and Northern Pike.

Thanks for all of the help you are giving on this application.

JOHN
