RE: Dataradio COR Ltd Experimental License
Form 442 Question 7: Experimentation Description

Dear Sir,

We respectfully wish to apply for an experimental license for our Waseca, MN Design and Development facility. Dataradio is a developer and manufacturer of two way radio modem systems and products for use in the public safety and private SCADA (supervisory control and data acquisition) markets. As such we are embarking on a project to develop fixed infrastructure products in the frequency bands listed in this experimental license application. We have the need to test these products in live situations at our facility in Waseca. Since we are developing product for several frequency bands and ranges, we would request the flexibility to test our products on these various bands in accordance with Sec. 5.3(l) on a non-interfering basis.

Thank you for your attention to this matter. Please let me know if there are any questions or if further data is needed.

Sincerely,

Chris Ludewig
Director of Engineering
