Defenshield is requesting an Experimental license to develop robotic armored vehicles. Defenshield currently supplies Mobile Defensive Fighting Positions to the DOD, DHS, DOJ and DOS. We are prototyping an armored ATV and the goal is to produce unmanned, near-autonomous armored vehicle for battlefield use.

For our prototypes we will be using the Futaba 9CAPS. We are requesting 5 units for modification. Modification will NOT include increases in power or utilization of the unit on any frequency other than those commercially available for this unit.

Please contact me at the numbers below for any additional information.

Regards,

Collins White
President,
Defenshield Inc.
