

Notification of the Federal Aviation Administration (FAA) is not required. At seven of the ten base station sites, the antennas will be side mounted on existing buildings and will not extend more than 6 meters above the existing building structures. At two of the base station sites, the antennas will be side mounted on existing towers that have already been approved by the FAA. These two base station sites and their antenna structure registration numbers are as follows:

Site Name	ASR Number
Hughes/4D	1036576
St. Elizabeth	1059783

At the only other site, “1700 Rhode Island”, the antennas are to be side mounted on a monopole support structure with an overall height (including appurtenances) of 180 feet (54.9 meters) above ground level. Due to its height and distance from airports, it is believed that the structure does not require notification of the FAA.
