

FAA Sketch, narrative

As described in application, there are two much higher, nearby cell phone towers, one about 63 meters higher than my proposed antenna, located 300 meters to my west, and a second cell phone tower about 32 meters higher, about 200 meters to my west. Those two cell phone towers dwarf my proposed antenna. In addition, there are higher trees within 100 meters.

There are no airports within 16 km of my location.
