

EXPLANATION OF AMENDMENT TO APPLICATION

As addressed with Commission staff, and pursuant to the comments of NTIA, the instant application (File No. 0341-EX-ST-2012) is being amended to add the following facilities to each of the sites specified on the request:

ADD: 4700-4940 MHz
.5W Output Power/530.900W ERP (Mean)
30M0D7D

This amendment is being submitted to ensure that the proposed operations are conducted on a channel-pair basis, in compliance with the 4400-4940 MHz channel plan specified in NTIA's "*Manual of Regulations and Procedures for Federal Radio Frequency Management*".

It is noted that to assist in processing and to ensure that the proposal is narrowly tailored and is as spectrally efficient as possible, the applicant's minimum frequency requirements are only two channel pairs from the 4400-4940 MHz channel plan, with each frequency having a 30 MHz bandwidth, and with each pair separated by at least 30 MHz. Accordingly, the applicant's frequency requirements are only two of the following channel pairs:

B1 and B1'
or
B2 and B2'
or
B3 and B3'
or
B4 and B4'
or
B5 and B5'
or
B6 and B6'
or
B7 and B7'
or
B8 and B8'
