Message:

Mr. Trevino:

We will be operating the Explorer radar from the rooftop, parking lot or shipping dock of the DRS Technologies facility for the purpose of confirming its operation and conducting an acceptance test with the U.S. Navy. The radar will be operated for relatively short periods (a couple of hours at a time). Most of the time we will be running it in a very low power mode (1 - 10mW input to the antenna). Occasionally we will need to run it at 1 - 10W input to verify the higher-power RF components.

Regards,

Bill
