Exhibit in response to Form 442 Question 6: Description of Research Project

Q: Is this authorization to be used for providing communications essential to a research project?

A: Yes, the communication is essential to our device with the following information:

- a) A description of the nature of the research project being conducted.
 - a. The research project is to transmit and receive data from an Endress+Hauser Wireless Level transmitter via LoRa protocol to a remote gateway.
- b) A showing that the communications facilities requested are necessary for the research project.
 - b. The main feature of this research project is the wireless communication via LoRa protocol.
- c) A showing that existing communications facilities are inadequate.
 - c. This experimental device is targeting greenfield projects (new construction) or upgrades of technology in brownfield (existing) facilities. Wireless communication would be more feasible during installation, commission, and operation of devices as opposed to hard-wired installations.

Please feel free to contact me with any questions or concerns.
