

Exhibit A

Fairfield Industries, Inc. ("Fairfield") hereby requests modification of its experimental license so as to add the frequencies listed below. Fairfield has determined that the frequencies it is authorized to use below 216 MHz, i.e. 215.53 - 215.99 MHz (see Exhibit B), are not suitable in certain areas along the Gulf Coast. This is due to the presence of Television Channel 13 stations, signals from which can be picked up by Fairfield's highly sensitive receiving equipment, a circumstance which in turn precludes use of the below - 216 MHz frequencies for recording Fairfield's geophysical data. In order to obviate this problem, while still allowing for the increased flexibility presented by the availability of additional frequencies (as detailed in its original application), Fairfield submits that good cause exists for authorizing use of the frequencies listed below on the same non-interference basis as those authorized previously. In all other respects the operational parameters specified in Fairfield's license for this station remains unchanged.

220.49 MHz	221.01
220.51	221.03
220.53	221.05
220.55	221.07
220.57	221.09
220.59	221.11
220.61	221.13
220.63	221.15
220.65	221.17
220.67	221.19
220.69	221.21
220.71	221.23
220.73	221.25
220.75	221.27
220.77	221.29
220.79	221.31
220.81	221.33
220.83	221.35
220.85	221.37
220.87	221.39
220.89	221.41
220.91	221.43
220.93	221.45
220.95	221.47
220.97	221.49
220.99	221.51
