Re: Correspondence Reference Number: 26159
File # 0872-EX-PL-2014

Dear Ms. Nguyen:

The purpose of this project is to test and verify the radio specifications for the new product that we are bringing to market. These tests are meant to provide realistic data for conditions to which the radios are normally exposed. These tests will help us to design in features that will reduce interference, improve data rates and improve longevity of the equipment in abnormal conditions.

The Name and telephone numbers of person who will terminate the system if interference occurs are:

Dean Busch – 720-308-5433
Yan Zhang – 425-829-8767
Steve McMeekin – 720-315-4862
Jeff Battin – 303-381-9211

Best regards,

A handwritten signature in black ink, appearing to read "D. Busch", is written over a light blue horizontal line.

Dean Busch

Sr. Compliance Engineer
FreeWave Technologies, Inc.
