Subject: FCC File# 0365-EX-ST-2014

Message:

Please explain all the FAA's concerns as below.

"Did the proponent actual analysis the flight area to see what frequencies would be impacted, or did your company copied the coordination channels from another, similar record? Because some of the frequencies in the area do not match what is on the STA data. For example, AF 012688 (M282.375) and AF 012687 (M279.65) are in the middle of the flight path but are not notched out in the coordination details. Also, if the user plans to avoid 379.975 - 420 MHz, then why is 406.1-430 MHz still shown on the amended STA?

Another concern that the FAA expressed to NTIA as recently as last year is the proponent's need to provide frequency deconfliction with the proposal for GeoSAR (or any other UHF band synthetic aperture radar). This is the way it was done in the past when the DOD submitted these requests.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of August 05, 2014 may result in application dismissal pursuant to Section 5.67 and forfeiture of the filing fee pursuant to Section 1.1108.
