FCC Office of Engineering and Technology Experimental Licensing
Form 442 File #: 0428-EX-PL-2009

This letter is to provide justification of the need to have the experimental license apply to all 50 states in the US.

The reason is that it is unknown at this time what locations our customer(s) will perform their developmental testing so we must prepare for it to take place within any state. The odds are a high percentage of the testing will be performed in a few Midwest states and a few Western states but it is hard to say for sure at this point in time.

We therefore are requesting approval for all states in the effort of being prepared for any test scenario.

Sincerely,

Chris Appelhans
