Ivan Galysh

Dear Ivan

Thank you for the frequency coordination request. The panel has discussed the application for satellite frequency coordination and has coordinated the frequencies as follows:

Uplink/Downlink 437,230 MHz

We note as a secondary payload you are implementing a store and forward packet radio system. Have you considered the possibility of including a FM voice repeater system instead?

You have indicated a launch date of July 2013 please advise us of final date for the launch when this becomes available and also what other satellites using amateur frequencies are on the same launch

Please note that all frequencies in the amateur satellite service are shared frequencies. We have attempted to make the best possible selection for your project.

You are also referred to the ITU requirements for satellites. We have prepared an easy reference document which is available on www.iaru.org/satellite, it will assist you to comply with the ITU requirements for Amateur satellites.

Please also read the attached "controlling satellites" document.

Best wishes for a successful project.

Please keep us informed of developments and progress.
