

GA-ASI is preparing a demonstration for the USAF customer in a quick turnaround schedule. The frequency bands and MODCODs are different from GA-ASI's current licenses due to end-customer needs.

GA-ASI is experimenting with two-way line-of-sight communication between a transceiver on the GA-ASI unmanned aircraft MQ-9 and two ground transceivers. The purpose is for downlink telemetry and video dissemination, and uplink control of airborne unit by the ground units.
