

EXHIBIT 2

Technical Data; Information Pertaining to Mobile Antennae

It is integral to Applicant's research (*see* Exhibit 1) that the mobile antennae configurations be exchangeable from omnidirectional to highly directional. During some portions of the research, the antenna configurations for the mobiles will be omnidirectional. During other portions of the research, some of the mobile antenna configurations will be oriented with the horizontal plane adjusted for true north (*e.g.*, 15 degrees maximum in California) and 84 degrees in the vertical plane (*i.e.*, NVIS configurations).
